
Conductix-Wampfler Acquires Jay Electronique

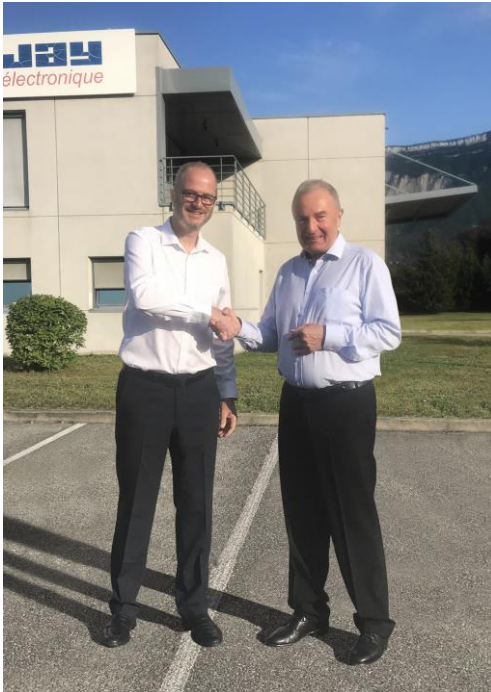

Expansion of the range of energy and data management systems to include industrial radio remote controls

In July 2019, Conductix-Wampfler acquired the French company Jay Electronique. The contract was signed by both parties on the 1st of July 2019. "With the solutions and know-how of Jay Electronique, we can expand the Conductix-Wampfler portfolio and further serve our customers in a forward-looking way," explains François Bernès, Chief Executive Officer (CEO) of Conductix-Wampfler.

Jay Electronique manufactures industrial radio remote controls with a high standard of safety and strong capabilities to offer customized solutions. Conductix-Wampfler's market penetration and global sales network will facilitate Jay's access to further international markets. The company's headquarters in Saint-Ismier near Grenoble currently employs around 60 people. The location benefits from its proximity to various electronics suppliers, research and educational institutions and technology parks and will so be expanded as a Center of Excellence for radio remote controls. "Jay Electronique has a strong expertise in electronics, software and safety - fields into which Conductix-Wampfler intends to expand further," says Bernès.

Conductix-Wampfler is one of the world's leading manufacturers of energy and data management systems for mobile equipment and machinery and part of the family-owned Delachaux Group, a global player in mission-critical engineered solutions.
